

Memo

| | |
|----------|--|
| Date: | June 20, 2025 |
| To: | Oregon Lottery Commissioners |
| From: | Mike Wells, director |
| Subject: | Follow up from the May 30, 2025, OSL Commission Meeting and Work Session |

Q: Commissioner Conrad asked what equipment was involved in a Lumen conversion at a retail location.

A: The local ISP provider (ISP) will run the broadband cable to the retail location and attach it to a modem. (Each ISP offers their own modem, so it is not pictured below.) Lumen will connect the ISP modem to the Meraki router using the available ports on the router to couple with the lottery equipment. The diagram below illustrates a retailer who offers both video and traditional lottery products. The network would run the same for retailers carrying only one product line.
